

Modular Music Practice Rooms		
Client	Bangor University	
Location	Bangor, North Wales	
<p>The Problem</p> <p>Bangor University required new music practice rooms to provide additional space whilst the main University Music Department is redeveloped. The university also wanted to retain the flexibility to remove and re-locate the rooms at a later date if required.</p>		
<p>The Solution</p> <p>AGS Noise Control supplied and installed 6no modular music practice rooms within existing rooms. The rooms included their own quiet ventilation systems, timber acoustic doors and isolating floating floors with carpet finishes. The rooms were installed to enable future removal without requiring substantial remedial works to the building.</p>		
<p>The Result</p> <p>Post installation tests by an independent acoustic consultant demonstrated the booths each achieved a 35 – 37dB _{dntw} reduction in noise levels between the music practice rooms and adjacent corridor areas.</p>		<p>Products Used.</p> <ul style="list-style-type: none"> 100mm thick Modular Acoustic Panels.
